

Digital Printing by Insulite File Requirements

All files should be submitted in a vector format with the exception of photographs, which can be a raster/bitmap format. Designs must be scaled to the actual size to be printed and shown 'as viewed from the exterior.'

Vector file types: EPS, PDF, AI, CDR, and DXF

- Vector images primarily originate from graphics programs, such as: Adobe Illustrator, CorelDraw, or AutoCAD
- Graphics can be scaled without loss of resolution
- File size is relatively small and easy to send electronically

Raster file types: JPEG, TIFF, and PSD

- Any image that is produced with Adobe Photoshop or a digital camera
- Resolution loss when enlarged, files must be submitted in actual (printing) size maintaining a resolution of at least 150 DPI
- File size can be large and often requires a file sharing program

A signed document declaring that the Buyer has rights to any images or patterns to be printed is required.
